Deepneuron Recruitment Project. Planning

Phase 1

UCI Room occupancy prediction (static)

Designed for estimating exact no. of people.

Feature Importance

Lots of data

Models

- Random Forest
- XG Boost
- Light GBM.

Data cleaning: Pandas

Joblib

Phase 2

Room occupancy estimation (temporal forecasting)

Designed to proactively forecast occupancy with minimal latency (Edge-AI)

Humidity as factor

Fewer Variables

Standard Scaler

Matplotlib/Seaborn

.shift() & .rolling()

Phase 3

Emergency scenario evacuation

Focuses on movement & safety side (evacuation data)

Movement speeds, stairwell density, etc.

Numpy

Plotly?

Put away due to time constraints.

Streamlit
